Protocol

Equivalent sound absorption area according to ISO 354

Measurement of sound absorption area per object in a reverberation room

Client: XAL GmbH, Auer-Welsbach-Gasse 36, AT-8055 Graz

Date of test: 23.05.2023

Description: Product name: MOVE IT 25 / 45 ACOUSTIC square grid inlay

Test according to EN ISO 354. Test performed with reduced number of speaker-microphone-combinations.

Object: Structure of the test specimen according to EN ISO 354, point 6.2.2.

Configuration consisting of a total of 2 pieces of MOVE IT 25 / 45 ACOUSTIC square grid inlay (Dimensions: 1235 mm x 1235 mm, d = 25 mm) randomly distributed at a distance of at least d = 200 cm from each other. Element consisting of PET felt.

Distance to the floor created with 4 adjustable feet each, consisting of threaded rods and wooden base.

- Test specimen surface per element (front side): 2x ~1,525 m² = 3,05 m²
- Distance from the floor to the lower edge of the test specimen: ~40 cm
- Construction height: d ~425 mm
- Weight per element: ~5,40 kg

Due to customer request, the graphical representation of the result deviates with regard to the y-axis distance according to EN ISO 354, point 8.3.
